Equipoise

Quality

Location photography courtesy of Bishop Burton College

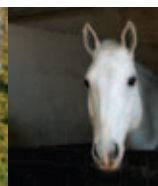

The Rice Equipoise trailer has been specially designed to enable horses to travel backwards during transit.

Loading is done from the front ramp, simply lead your horse up the front ramp, tie him up and exit through the groom's door or the open rear ramp.

The front breech bars can be secured in the same way as you would in a traditional trailer, and the Equipoise is fitted with a bar that prevents your horse being able to back out down the front ramp.

The partition in the Equipoise can be removed and the partition wing at the front of the trailer can be moved from side to side to assist loading. The wing on the rear partition is static and contains a substantial biting guard.

To improve comfort and reduce anxiety, there are large windows in the rear top doors and the rear third of the roof, maximising available daylight.
